

# How to delete an administrator from an organization

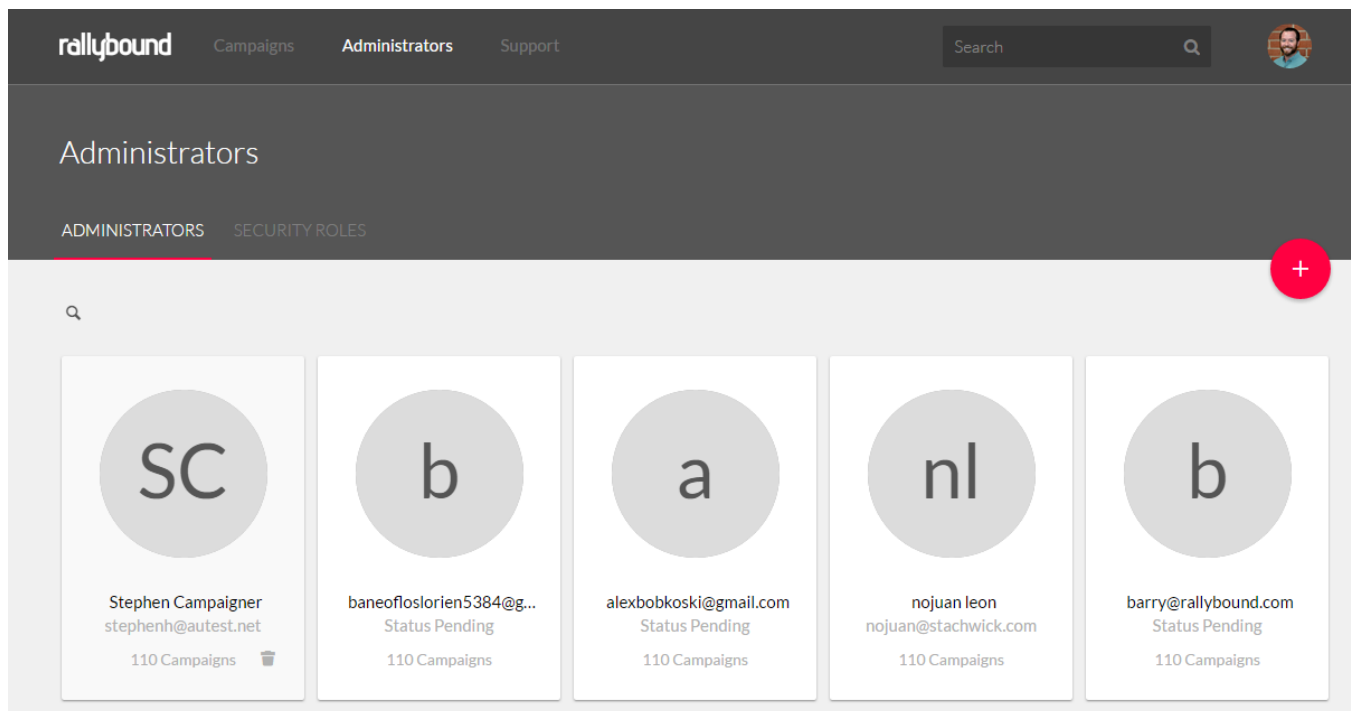

Rallybound now allows organizations to manage administrators and their security roles across an organization, groups, and campaigns.

**Important: An administrator always possesses the security role on the group they've been added to and all groups and campaigns within that group.** For example, adding an administrator to the organization level will add that administrator, with their security role, to all campaigns within the organization.

To delete an administrator completely from an organization, follow these steps:

1. Log into your admin account at [admin.rallybound.com](https://admin.rallybound.com)
2. Navigate to the Administrators panel in the header
3. In the Administrator interface, hover over the card of the desired administrator
4. Click the trash icon that appears on hover
5. Confirm that the administrator should be deleted

**Important: Once the administrator is deleted, they will need to be reinvited in order to have any permissions in any area of the organization**

The screenshot shows the Rallybound web interface. The top navigation bar includes the Rallybound logo, links for Campaigns, Administrators, and Support, a search bar, and a user profile icon. The main content area is titled "Administrators" and has two tabs: "ADMINISTRATORS" (selected) and "SECURITY ROLES". A search icon is visible in the top left of the main area. A red circular button with a white plus sign is in the top right. Below the tabs, there is a list of five administrator cards. Each card displays a circular profile picture with initials, the administrator's name, email address, status, and the number of campaigns they manage. The first card, for Stephen Campaigner, has a trash icon in the bottom right corner.

Name	Email	Status	Campaigns
Stephen Campaigner	stephenh@autest.net	Active	110
baneofloslorien5384@g...		Status Pending	110
alexbobkoski@gmail.com		Status Pending	110
nojuan leon	nojuan@stachwick.com	Active	110
barry@rallybound.com		Status Pending	110
