

# Donation Custom Fields

Custom fields can be added to donation forms using the Donation form in the [Form Builder](#). Depending on the donation form, custom fields are added to the end of the billing/payment section of the donation form or just before it.

If a custom field is added to a platform donation page, the field will appear on the platform donation page only, and not on individual campaign donation pages within that platform.

When donating on a [platform site](#) or global donation form, if the donor elects to make a General Donation they will be presented with the custom fields from the platform site/global donation form. However, if the donor elects to donate to a fundraiser or team that is participating in a specific campaign, the custom fields from that campaign's donation form will appear on the platform/global form for the donor to fill out.
