

Payment Processing

Rallybound offers payment processing with a variety of processors. The only processor which can be configured in the admin is NeonPay — please [click here](#) to learn more. To enable any other processor, please contact support. Below is a list of supported processors and the features available with each:

Processor	Recurring	One-Click Donations	Recommitment	ACH	Apple Pay	Google Pay	Refunds	Partial Refunds	Payment Status	Test Mode	INTL Currencies
NeonPay											
iATS											Any that iATS supports
Authorize.net											CAD
1stPay											
Moneris					CAD only	CAD only					CAD
Stripe			*								Any that Stripe supports
USAePay											GBP
PayPal Direct											
PayPal Payflow											

**Recommitment on registration and ticketing not available*

Org Processor vs Event Processor

The Rallybound system has two types of processor integrations, which are technically termed Org Processor and Event Processor. Event Processors use a legacy system that confines the processor/merchant account to a single campaign. Practically, this means that many new and innovative features that Rallybound offers are only available with Org Processors. Some of these include:

- [Rallybound Recurring Donations](#)
- [One-click donations](#)
- [Moving donations between campaigns](#)
- Apply a single processor to multiple campaigns or groups

To know if you're configured with an Event Processor, navigate to your campaign in the Admin and click System > Payment Processors. If this tab is available and lists an active processor, you have an Event Processor. If the tab doesn't show at all, you do not have an Event Processor. However, you still may need to configure an Org Processor. To configure NeonPay, [click here](#). For any other processor, please contact Rallybound support.
