

Strava

Rallybound's [Endurance Challenges](#) feature includes an integration with Strava, allowing fundraisers to [automatically import their Strava activities](#) into their endurance activity log, to count as progress towards their endurance goal.

In the progress of [creating](#) an Endurance Challenge, administrators can allow fundraisers to import endurance activities from Strava. [Click here](#) to learn more. Once Strava is enabled, fundraisers can connect their Strava account to import activities into their activity log. [Click here](#) to learn more.

For Rallybound clients who have paid for their campaigns to be [white-labeled](#), the Strava-integration app can be white-labeled as well so that Strava users see your organization's name and logo when connecting their accounts. Please contact us to configure a white-labeled app for your organization.
