

Livestreaming

Organizers and fundraisers everywhere are taking their events from the local community to the online community, finding creative new ways to engage and advocate for their cause. Rallybound answers this call by providing an integrated solution to embed livestreams into campaign and fundraising pages with just a few clicks.

Here's how it works in a nutshell:

- An administrator can [embed a livestream into a campaign homepage banner](#)
- With full control over fundraiser livestream capabilities, administrators can [allow or disallow](#) livestreaming and chat [on fundraising pages](#)
- Donors can donate and chat (if enabled) to your campaign without missing a moment of the livestream
- Administrators can view which fundraisers used livestreams within [reports](#)
- Fundraisers and administrators can add [fundraising overlays](#) to their livestream videos

Note

The livestream feature itself is a paid upgrade, and additionally requires a template that supports Site Builder (which could constitute an additional paid upgrade). To configure livestreaming for your organization, please contact our customer success team at clientsuccess@neonone.com.
